

KYLIAN KOUDA KUETE

Bilingual Data Analyst | Data Quality, Automated Validation and Business Intelligence
Montreal region, QC | 514-431-2515 | kylanck22@gmail.com | Bilingual (English & French)
kylan-kk.github.io/Kylian-portfolio | github.com/Kylian-KK | linkedin.com/in/kylian-kouda-2b86b1319

PROFESSIONAL SUMMARY

Bilingual data analyst who builds the checks that make data trustworthy before anyone analyzes it. Develops automated validation tools in Python and SQL that flag missing values, inconsistencies and duplicates across multiple sources, and documents the procedures so quality control does not depend on a single person. Experienced across the full analysis cycle: cleaning and structuring large datasets, descriptive statistics and hypothesis testing, predictive modelling, and delivering dashboards that non-technical users can act on without analyst support. Microsoft-certified in Power BI (PL-300) and Excel Expert (MO-201), with ITIL Foundation (Version 5) in progress. Comfortable presenting findings to both technical and business audiences in English and French.

CORE COMPETENCIES

- **Data Quality & Validation:** Systematic checks for missing values, inconsistencies and duplicates; profiling; outlier detection; cross-source reconciliation; validation checkpoints and exception reporting
- **Automation & Scripting:** Python (pandas, numpy, scikit-learn, SciPy), SQL, Spark SQL; reusable validation components; automated reporting workflows; ETL pipelines
- **Statistics & Modelling:** Descriptive statistics, correlation, regression, hypothesis testing (Kolmogorov–Smirnov, Shapiro–Wilk); predictive modelling with cross-validation and performance metrics
- **Business Intelligence:** Power BI (Microsoft Certified Data Analyst Associate), Tableau, matplotlib, seaborn; KPI definition and tracking; self-serve dashboards for non-technical users
- **Data Management:** Structuring large multi-source datasets, data modelling, joins and migrations, assessing the impact of changes on existing records
- **Documentation:** Writing and maintaining procedures, recording decisions and their impact, turning ad-hoc review into repeatable documented processes
- **Governance & Compliance:** ITIL Foundation (Version 5); nine compliance modules completed in regulated financial services covering information security, access handling and privacy
- **Tools:** Excel (Microsoft Office Specialist Expert), Microsoft 365, SharePoint, Teams, Power Automate, Alteryx, ArcGIS Pro, Jupyter, Git/GitHub
- **Languages:** English and French (fluent, written and spoken) — bilingual capability formally certified by La Cité Collégiale

CERTIFICATIONS

- ITIL Foundation (Version 5) — PeopleCert, in progress, exam october 2026
- Microsoft Certified: Power BI Data Analyst Associate (PL-300)
- Microsoft Office Specialist: Excel Expert (MO-201)

DATA & ANALYSIS EXPERIENCE

Research Assistant – Data | Mamion Tech — Douala, Cameroon | June 2023 – February 2024

- Developed automated validation tools in Python (pandas, numpy) and SQL running continuous checks across large operational datasets, flagging missing values, inconsistencies and duplicates before analysis.
- Cleaned, organized and structured data from multiple sources, substantially reducing manual verification time and improving the accuracy and consistency of datasets released to internal teams.
- Automated reporting workflows and documented the procedure, replacing ad-hoc checks with a repeatable process the team could maintain.
- Ran descriptive analyses to track key indicators and identify trends, then recommended improvements to data collection and presented findings to technical and business audiences.

Data Analyst Intern | T. Consulting Tax & Legal — Douala, Cameroon | June – December 2022

- Gathered requirements from business teams and translated them into SQL reports and Power BI dashboards used directly by stakeholders.
- Defined and tracked key performance indicators, giving teams a consistent basis to measure progress and surface emerging trends.
- Optimized SQL queries to improve system performance by 20% and built reliable, repeatable data models.

OTHER PROFESSIONAL EXPERIENCE

Sales Representative – Activations Team | Neo Financial — Ottawa, ON | May 2026 – August 2026

- Track real-time performance data against targets in a regulated financial services environment, identifying variances early and adjusting priorities accordingly.
- Apply strict data-handling, access, privacy and security standards; completed nine mandatory compliance modules.

Grocery Clerk | Loblaw — Ottawa, ON | September 2025 – August 2026

- Worked independently through high-volume shifts with consistent accuracy, while completing a full-time diploma.

SELECTED PROJECTS

Full code and documentation available at github.com/Kylian-KK

Data Governance & Validation Pipeline — *421,570 records across 45 sites*

- Built an end-to-end validation pipeline structured as documented stages with checkpoints: data understanding, pre-merge coherence checks, profiling, cleaning and validation.
- Developed reusable profiling components (scikit-learn BaseEstimator/TransformerMixin) generating automated reports on completeness, primary-key duplicates, descriptive statistics and outliers.
- Verified coherence across four source files before joining — orphan identifiers, row duplication, cross-table inconsistencies — and documented every cleaning decision against its impact on existing records.

Clinical Data Exploration — Diabetes — *exploratory analysis and quality control*

- Profiled a medical dataset (pandas, numpy, seaborn, matplotlib): structure, variable types and systematic review of missing values, including zero values acting as disguised missing measurements.
- Detected outliers via boxplots and statistical thresholds, then produced descriptive measures, distributions and bivariate analyses.

Housing Affordability Analysis — *cross-province comparison*

- Compared housing costs against household income across Canadian provinces to identify where affordability pressure is greatest, with supporting visualizations.

Big Data E-Commerce Analysis (PySpark) — *distributed processing*

- Processed large-scale transaction data with PySpark to analyze sales, returns and promotional performance, applying cleaning for missing values, incorrect types and inconsistencies.

EDUCATION

Diploma, Applied Data Science | La Cité Collégiale — Ottawa, ON | September 2024 – April 2026

- Two-year project-based technical program: programming (Python, SQL), databases, statistics, predictive modelling and data visualization.
- Compétences Cité portfolio: eight competency badges, including Integration-level Bilingual Capability and three Entrepreneurship & Initiative badges.

Baccalauréat (Sciences) | Bilingual High School Logpom II — Douala, Cameroon | June 2021
